Multi-Purpose Sanitising Wipes

Multi-Purpose Sanitising wipes designed for general surface cleaning and disinfection in a range of environments. For use on hard surfaces and equipment, they will efficiently clean and provide protection against microorganisms such as bacteria, yeast & viruses.

2 products in this range.

At a glance:

- Versatile disinfectant
- Halal certified
- Proven to kill microorganisms

Ideal for:

- Use in gyms, shared offices, municipal building with high foot traffic
- Front of house surface cleaning
- Non-food contact surfaces

Sustainability:

- 89% plastic reduction for refill bag vs the bucket with lid
- Tritex material, canister, buckets, lids, and labels are fully recyclable
- Cardboard used in our outer packaging is FSC approved

How to use

STEP 1 Risk assessment

Please follow your agreed risk assessment policy guidelines regarding the use of PPE.

STEP 2 Wipe selection

Check pack for use period and dispense a wipe.

STEP 3 S-Shape technique

Wipe the surface in an S-Shape moving from clean to dirty. Use the wipe flat not scrunched. Do not go over the same area twice with the same wipe. Use a fresh wipe if your wipe becomes soiled or dry.

STEP 4 Discard

Discard used wipes in the appropriate waste bin following your local agreed guidelines.

STEP 5 Let dry

Allow the surface to dry before use.

Use biocides safely. Always read the label and product information before use. Store in a cool, dry place out of direct sunlight.

Technical details

Chemical formulation:

Multi-Purpose Sanitising Wipes contains a blend of three active ingredients in its formulation. Didecyltrimethylammonium chloride (DDAC) is an antiseptic/disinfectant that is used in many biocidal applications. They cause disruption of intermolecular interactions and dissociation of lipid bilayers. N-alkyl ethylbenzyl dimethyl ammonium is a quaternary ammonium compound with surfactant properties, it is an active ingredient due to its antimicrobial properties. Alkyldimethylbenzylammonium chloride and ADBAC, is a type of cationic surfactant. It is an organic salt classified as a quaternary ammonium compound.

Materials:

Tritex[®] material is made by bonding layers of spunbond and meltblown polypropylene fibres together in a high heat process before a hydrophilic coating is applied. This material is 100% synthetic.

High strength

The material offers high strength in both directions – across and along the wipe.

Excellent solution retention

Ensuring even wetness throughout the wipe.

Very low linting

Low risk of leaving contaminating fibres on surfaces.

Efficient solution release

Active wipe ingredients are transferred to the surface rather than being trapped in the wipe material fibres.

Efficacy details

Effective against	Test	Kill time
Bactericidal		
E. coli	EN 1276	1 minute
	EN 13697	1 minute
Staphylococcus aureus	EN 1276	1 minute
