## How to use

### STEP 1 Before you start

Pay particular attention to the elderly, children and patients with sensitive skin. Select your Medipal Patient Care Product. Use a fresh wipe for each step. Follow your standard moving and handling techniques when bed bathing patients. Do not use on wounds or broken skin.

### STEP 2 8 step bed bathing technique

**1. Head & Neck**  
Use the wipe on face, paying particular attention to nose, ears and neck but avoid eyes.

**2. Arm and armpit**  
Starting from upper shoulder, clean down first arm and hand. Pay particular attention to areas between the fingers, elbow joint, and any skin folds. Clean under armpit.

**3. Arm and armpit**  
Starting from upper shoulder, clean down second arm and hand. Pay particular attention to areas between the fingers, elbow joint, and any skin folds. Clean under armpit.

**4. Leg and foot**  
Starting from hip joint, clean down first leg to the foot and sole. Pay particular attention to areas between the toes, knee joint and any skin folds.

**5. Leg and foot**  
Starting from hip joint, clean down second leg to the foot and sole. Pay particular attention to areas between the toes, knee joint and any skin folds.

**6. Chest and abdomen**  
Clean the chest being careful with the sensitive areas.

**7. Back and lower back**  
Clean the back and lower back.

**8. Groin and pubic area**  
Wash the groin and perineal area following your standard nursing practice.

### STEP 3 After care

There is no need to rinse, just allow the patient's skin to air dry.

### STEP 4 Disposal

Discard used wipes in the appropriate waste bin following your local agreed guidelines.

Do not flush

Do not macerate

## Technical details

Medipal's skin cleansing wash cloths have been developed to offer the ideal blend of non-woven materials. Designed to offer effective cleaning whilst delivering a gentle, luxurious feel these products are all guaranteed skin-friendly.

### Chemical formulation:

Medipal Skin Cleansing solution is designed by our in house experts who have carefully blended gentle skin friendly cleansers in combination with vitamin B5 and vitamin E which help keep skin clean, fresh and nourished. The formulation is maintained at a skin balanced pH and is dermatologically tested.

### Materials:

Spunlace material is made by mechanically entangling fibres through the application of high pressure water jets. This gives the material a thick, soft and strong feel. The apertured texture gives the wipes a high liquid capacity which makes them suitable for wiping larger surfaces and the drape of the material gives a 'cloth-like' feel.
