**Packs per case:** 25  
**Product code:** S559110MP

### 8 Antimicrobial Skin Cleansing Wash Cloth, Flow Wrap

**Packs per case:** 30  
**Product code:** S657110MP

## Chemical formulation:

Medipal Skin Cleansing solution is designed by our in house experts who have carefully blended skin friendly cleansers in combination with Chlorhexidine which help keep skin clean and fresh. The formulation is maintained at a skin balanced pH.

## Materials:

Spunlace material is made by mechanically entangling fibres through the application of high pressure water jets. This gives the material a thick, soft and strong feel. The apertured texture gives the wipes a high liquid capacity which makes them suitable for wiping larger surfaces and the drape of the material gives a 'cloth-like' feel.

## Effective cleansing, no rinsing required

Medipal Antimicrobial Mitts & Cloths are single-use and contain Chlorhexidine, a proven ingredient that helps reduce bacterial counts on the skin. Designed for bed bathing, skin cleansing, and patient cleansing strategies, they require no rinsing, making them ideal for efficient patient care in healthcare settings.

- ✓ **Contains Chlorhexidine** – Helps reduce bacteria
- ✓ **No-rinse formula** – Quick and efficient skin cleansing
- ✓ **Skin-friendly pH** – Gentle and suitable for all skin t

## How to use

### Step 1 Before you start

Pay particular attention to the elderly, children and patients with sensitive skin. Select your Medipal Patient Care Product. Use a fresh wipe for each step. Follow your standard moving and handling techniques when bed bathing patients. Do not use on wounds or broken skin. Please follow your local guidance for correct PPE usage.

### Step 2 7 Step bed bathing technique

**1. Left arm & armpit**  
Starting from upper shoulder, clean down first arm and hand. Pay particular attention to areas between the fingers, elbow joint, and any skin folds. Clean under armpit.

**2. Right arm & armpit**  
Starting from upper shoulder, clean down first arm and hand. Pay particular attention to areas between the fingers, elbow joint, and any skin folds. Clean under armpit.

**3. Left leg & foot**  
Starting from hip joint, clean down first leg to the foot and sole. Pay particular attention to areas between the toes, knee joint and any skin folds.

**4. Right leg & foot**  
Starting from hip joint, clean down first leg to the foot and sole. Pay particular attention to areas between the toes, knee joint and any skin folds.

**5. Chest & abdomen**  
Clean the chest being careful with the sensitive areas.

**6. Back & lower back**  
Clean the back and lower back.

**7. Groin & pubic area**  
Wash the groin and perineal area following your standard nursing practice.

### Step 3 After care

Allow the patients skin to air dry.

### Step 4 Disposal

- Do not flush**
- Do not macerate**

Discard used wipes in the appropriate waste bin following your local guidelines.
